ABOUT ME

I love participating in hackathons and technical projects, which definitely allows me to iterate quickly, collaborate with new people and deliver some kind of practical solutions under some real-world constraints. I am particularly interested in the opportunities that allow me to build scalable software, work on challenging engineering problems, and contribute to high-impact products while continuously learning from talented teams.

EDUCATION

NIIT UNIVERSITY, NEEMRANA

B.Tech CSE(Cybersecurity)

CGPA :- 7.50

2023-2027

DELHI PUBLIC SCHOOL, NASHIK

Class X :- 82.8%

Class XII :- 80%

2013-2023

SKILL

- Android Studio
- Full-stack(MERN)
- MySQL
- Docker
- C++
- AWS

WORK EXPERIENCE

Learning Assistant-Mentoring & Extension Education Desk, CoEET,Neemrana

01-25 TO 05-25

Worked on Google Forms,Spreadsheets and allocation of mentors with set guidelines.

- As a learning assistant I worked in the team for the allocating mentors, evaluating them using scripts that grade the members.
- Collaborated with the team on various different parameters to rank a mentor and to solve the problems faced by mentees.

PROJECTS

ProjectSynergy — IoT Air Quality Monitoring Android App

- Developed an Android application using Android Studio to monitor environmental gas sensor readings in real time.
- Collected data from MQ-135, MQ-6, and MQ-7 gas sensors and uploaded the readings to Firebase cloud database.
- Implemented Firebase Authentication (email/password) for secure user login and access control.
- Designed a mobile interface to visualize live sensor data retrieved from Firebase for remote monitoring.

Tech Stack: Android Studio • Firebase • IoT Sensors • Cloud Database • XML UI

MiniAirBnB — Full-Stack Property Listing Platform

- Developed a full-stack accommodation listing platform inspired by Airbnb enabling users to browse, create, and manage property listings.
- Built the backend using Node.js and Express.js, implementing RESTful routing and server-side logic for listing management.
- Integrated multiple npm packages for authentication, session management, and middleware functionality to improve application security and maintainability.
- Implemented server-side rendering using templating (EJS) to dynamically generate listing pages and user interfaces.
- Structured the application with modular MVC architecture, enabling scalable code organization and maintainability.

Tech Stack: Node.js • Express.js • MongoDB • EJS • npm Packages • JavaScript • CSS
